---

Request For Support 13/5/2019    Currently, I need to study, as soon as possible, the following issues:

1. The Multistatic Radars Systems
2. The Leech AAM/SAM.
3. Certain advanced mathematical formulas with Wolfram's Mathematica
4. Using Blender v 2.78 for simulating the Leech Missile and the Multistatic Radars.
5. Using Gazebo v7 for simulating the Leech Missile and the Multistatic Radars.
6. Advancing the Asparagus Robotic Harvester's Design.
7. Mathematical modeling of combat aircrafts' evasive maneuvers.
8. Designing a fully self-sufficient (and legitimate) British National Economy.
9. Some other issues.

Studying the above issues is much work which demands unobstructed concentration. Therefore, I kindly request from any legitimate and well intending individuals and organizations to legally, contribute in effectively protecting me from any potential attempt (e.g. gang-stalking, etc.), on behalf of the contemporary colonising States, to violate my human rights and/or to obstruct, by any means, my current studies.

Furthermore, I would be happy in case that, a safe-house and a van equipped with a mechatronics workshop's measuring equipment, machinery, tools, consumables, computers, communication links and power supply, could be provided, after talking with me, for my work.
