## Modified Bio-Society

The addictions to the narcotics is an ancient phenomenon.

Narcotics diminish the capacity of the individuals and of the social-groups to remain self-sufficient, in many perceptiveness.

Settler-colonialism is the consequence of the existence of social-groups which are unable to achieve their self-sufficiency and which perpetually attempt to substitute self-sufficiency through perpetrating criminal entryism.

Nations which, embed incompatible with narcotics-addiction civilizations, exist.

In order to survive from the criminal entryism, these non-narcotics Nations, according to my opinion, they should modify their corresponding bio-society in order to remain entryism-proof.

Among these modifications should be to followings:

- The supermarkets should become Nationalized and controlled by the Armed Forces and they should employ for their operation exclusively the Nation's youth (age 17 – 22) and robotics for their operation; and they should, as much as possible, shell food and beverages which they were produced domestically.

- The pharmaceutical industry, the hospitals, the medical research, the diagnostic centers, the geriatric centers, and the pharmaceutical distribution system, they should become Nationalize and controlled by the Armed Forces. For their operation robotics should be used as much as possible. Specifically for the geriatric centers, exclusively native personnel should be employed. Each Nation should live by the ways of its own civilization, though without posing threats or burdens to other Nations.

Human life is sacred and invaluable, therefore the innocent civilians which are being threatened by the settler-colonialism's genocidal policies should be protected, also, by adequate bio-society's modifications of their corresponding Nation.
